pallet of 4**

A readily available source of phosphorus and calcium, our Down To Earth's Liquid Bone Meal is a convenient liquid concentrate that encourages increased flower, fruit, vegetable and seed production. It contains slow and fast reacting forms of phosphorous derived from micronized and stabilized

bone meal that disperses uniformly throughout the root zone for improved availability and rapid uptake. Designed for use in soil, soilless and foliar applications. DTE's Liquid Bone Meal stimulates early root development, aids in plant establishment and improves flavor, quality and yields.
